

Develop A Web Application Using Node-RED Service:-

In this milestone, let's develop the web application using the Node-RED service.

The web application should have the following features:

- Connect to the IBM IoT platform and get the temperature, humidity, and soil moisture
- Display the parameters in the UI
- Retrieve the image from object storage and display it in UI
- Configure the buttons to control the motors

Develop A Web Application Using Node-RED Service

Display the image in the Node-RED web UI and also display the temperature, humidity, and soil moisture levels. Integrate the buttons in the UI to control the Motors.
